

BIRDS, BEES, BATS, BUGS AND BLOOMS PROTECTING BIODIVERSITY IN AND AROUND YOUR HOTEL

What is Biodiversity? Biodiversity refers to the variety of living species on Earth, including plants, animals, fungi, micro-organisms like bacteria and of course humans. Earth's biodiversity is so diverse that scientists estimate there are millions of species not yet discovered, at the same time there are countless currently threatened with extinction due to human activities. This puts the marvelous biodiversity of our Earth at risk.

Maintaining Biodiversity is vital to our survival on Earth. Taking bees as an example, these clever little pollinators enable our plants and flowers to reproduce and grow. In the last 50 years, the UK has lost almost half of its natural biodiversity, with bee populations one of the species most severely affected. Habitat loss, disease and the use of toxic pesticides has seen a third of the UK's honeybees lost in that time. This has an impact on our food production and resources and also effects our air quality, species diversity and our general habitats.

Biophilia refers to the innate human connection to nature and the natural world. This connection has been shown to have significant positive impact on our health and wellbeing. By installing biophilic elements in your hotel you can **improve the overall environment and experience for your team and your guests.**

Although it may seem that biodiversity is only related to the countryside this is not the case, **it also includes our cities.** With this in mind, more urban businesses and homeowners are implementing improvements to support and protect the local biodiversity, including **roof gardens and bee hives**.

Did you know? Plants have been proven to provide health benefits including:

- √ reducing stress
- ✓ making people calmer and happier

mission: net zero

- ✓ improving air quality and humidity levels
- ✓ absorbing noise
- ✓ improving concentration, productivity and creativity.

Want to learn more? Please click the link below to browse more guidance on biodiversity, including resource sheets available to download with top tips and initiatives which can be implemented in various hotel settings, with options for all sizes and locations.

We'd love to hear from you! Get in touch to learn more and see how your business can protect and support the biodiversity in and around your hotel to flourish while improving the wellbeing of your team and guests.

Knights Beekeeping are on a mission to help regenerate biodiversity in the UK through supporting, protecting and resorting honeybee populations, one of our vital pollinators.

We exist to give everyone the opportunity to keep their very own honeybees at one of our beautiful apiaries. Our team will tend to the bees allowing you to enjoy your very own honey, visit us on one of our bee experience days and take pride in helping restore biodiversity.
